Hiring Team

Flaconi GmbH

Re: Senior Machine Learning Engineer – Personalization & Search

Dear Hiring Team,

I am excited to apply for the Senior Machine Learning Engineer – Personalization & Search role at Flaconi, where my 8+ years of delivering production AI solutions—including recommendation and semantic search systems—can directly accelerate product discovery for millions of beauty shoppers.

At Optum.AI I engineered a LangGraph-based analytics platform that combined stateful multi-agent reasoning with real-time chart generation, cutting manual analysis effort by 98%, and I enhanced dense retrieval performance by training a cross-encoder that boosted retrieval accuracy by 20%; these experiences align with Flaconi's need for embeddings-driven semantic search and learning-to-rank models. Earlier, I built a lab extraction agent using Claude Opus 4.7 and Amazon Textract, automating work tied to 800 Jira tickets, demonstrating my ability to integrate LLMs and RAG pipelines for product content generation.

Most recently, I deployed a production-grade SLA breach prediction system on GCP using Random Forest, LightGBM, FastAPI and MLflow, integrating GPT-4 reasoning for real-time root-cause analysis and achieving a 67% reduction in downtime, which showcases end-to-end model ownership, CI/CD, containerization with Docker, Kubernetes orchestration, and monitoring—core components of Flaconi's MLOps stack. Additionally, I built SQL and PySpark data pipelines that reduced manual reporting effort by 95% and implemented Elasticsearch-Kibana observability that improved traceability efficiency by 80%, reinforcing my expertise with Python, SQL, PySpark, and cloud-native data platforms.

Beyond technical delivery, I have mentored junior engineers across three cross-functional teams, led over 30 AI prototype workshops, and regularly presented findings to stakeholders in clear English, while advancing my German to A1 level, ensuring effective collaboration within Flaconi's multilingual environment.

Sincerely,

Abhinav Kaushik
