Hiring Team

KAKE

Re: Senior Data Engineer

Dear Hiring Team,

I am applying for the Senior Data Engineer position at Kake. With years of experience delivering production AI and data solutions across healthcare, telecom, and AIOps, I consistently turn raw data into reliable, scalable pipelines and actionable insights.

At Optum.AI I designed end-to-end data pipelines with Airflow and dbt that ingested and transformed clinical data into a Snowflake warehouse, enabling analytics for AARP medical plans. At Viavi Solutions I built a production-grade SLA breach prediction system using Random Forest and LightGBM with FastAPI and MLflow, which cut downtime by 67%. Earlier, at Nippon Data Systems I automated BAU medical-audit reporting with SQL and PySpark pipelines, reducing manual reporting effort by 95% and improving traceability efficiency by 80% through Elasticsearch observability.

I can contribute by designing and maintaining robust data pipelines and warehouses that support Kake's analytics and modeling needs, drawing on my experience building Airflow-driven ETL flows for Snowflake and BigQuery. Finally, I will translate business questions into clear, data-driven analyses and visualizations,

My fiancé lives in Berlin, and I am relocating to Germany to build my life and career there long term while continuing to improve my German (currently A1). I look forward to discussing how my background aligns with Kake's goals.

Sincerely,

Abhinav Kaushik
