Hiring Team

Mistral

Re: Applied AI Engineer

Dear Hiring Team,

I am applying for the Applied AI Engineer role at Mistral AI. With 8+ years delivering production AI solutions, an MSc in Machine Learning and AI, and recent work building LangGraph-based analytics and fine-tuning Claude Opus models for healthcare, I match the core requirements of deploying high-impact use cases, working with state-of-the-art GenAI, and collaborating with customers from pre-sales through implementation.

At Optum.AI I engineered a LangGraph analytics system that cut manual analysis effort by 98%, and at Viavi Solutions I deployed a production SLA-breach prediction service that reduced downtime by 67%. Both projects involved end-to-end model fine-tuning, API integration, and real-time inference, directly demonstrating my ability to ship robust AI products with measurable business impact.

I will bring the same end-to-end delivery mindset to Mistral. For production deployments I will design and launch scalable inference pipelines using FastAPI and MLflow, as I did for the SLA-breach system. For GenAI applications I will extend agentic workflows with LangGraph, building custom RAG and fine-tuning pipelines similar to the AARP analytics platform. I will also contribute code to Mistral's open-source repositories, leveraging my experience publishing LangGraph extensions that have already gained community adoption.

My track record shows I can translate client requirements into production-ready AI solutions, move prototypes to fully operational services, and work closely with product, research and stakeholder teams. Whether leading pre-sales workshops at Optum.AI or delivering POCs for 30+ clients at Viavi, I consistently bridge technical depth with clear communication, aligning with Mistral's low-ego, high-standards culture and focus on shipping results.

My fiancé lives in Berlin, and I am actively learning German (A1 in progress), so I am ready to relocate to Germany and build a long-term career there. I look forward to discussing how my experience can help Mistral's customers achieve transformative AI outcomes.

Sincerely

Sincerely,

Abhinav Kaushik
