Re: Machine Learning Data Scientist

Dear Hiring Team,

I am applying for the Machine Learning Data Scientist role at Catawiki. With 8+ years delivering production AI solutions, an MSc in Machine Learning and AI, and recent work building LangGraph analytics and real-time inference pipelines, I match the core requirements of building scalable production models, deploying on Kubernetes, and collaborating across product and engineering teams.

At Optum.AI I engineered a LangGraph-based analytics system that cut manual analysis effort by 98%, and at Viavi Solutions I deployed a SLA breach prediction service that reduced downtime by 67%. Earlier, I improved semantic alarm classification by 73.5% using SBERT and DBSCAN. These metrics demonstrate my ability to create high-impact, production-ready ML products at scale.

Finally, I will, as I have done delivering 30+ AI prototypes for diverse clients.

My track record shows I can take prototypes to production, translate stakeholder needs into practical AI solutions, and work across technical and business teams. I have built full pipelines, from data extraction with Python/Flask to CI/CD automation with Jenkins, Docker and Kubernetes, delivering reliable services such as the SLA breach predictor and the Think Tree learning platform. This aligns with Catawiki's emphasis on collaborative, end-to-end model delivery and rapid experimentation.

My fiancé lives in Berlin, and I am relocating to Germany to build our life together while continuing my career. I am already learning German (A1 level) and am committed to settling long-term. I look forward to discussing how my experience can contribute to Catawiki's data team.

Sincerely

Sincerely,

Abhinav Kaushik
