Re: Senior Applied Scientist

Dear Hiring Team,

I am applying for the Senior Applied Scientist position. With 8+ years delivering production AI and ML solutions across healthcare and telecom, I consistently turn complex data into actionable insights, as demonstrated by my recent work reducing manual analysis effort by 98% at Optum.AI.

At Optum.AI I engineered a LangGraph-based analytics system that cut manual effort by 98%, and enhanced dense retrieval accuracy by 20% using a cross-encoder. Previously at Viavi Solutions I deployed a SLA breach prediction system that lowered downtime by 67% and built an AI-powered Project Discovery Assistant achieving a 90% match rate for technical use cases. These projects required large-scale data processing, Python development, and advanced SQL, directly aligning with your need for rigorous causal modeling and high-precision forecasting.

I can contribute by engineering robust feature pipelines in Databricks and cloud environments, leveraging my background with GCP, Azure, Docker, Kubernetes and extensive Python/SQL work to handle high-velocity datasets.

My fiancé lives in Berlin, and I am learning German (A1 in progress), so I am ready to relocate to Germany and build my long-term career there.

Sincerely,

Abhinav Kaushik
