Re: Applied Scientist

Dear Hiring Team,

Audible needs a unified system that can ingest new audio titles, extract semantic metadata, and deliver personalized recommendations and on-demand summarizations for millions of listeners. In this Applied Scientist role I will build a LangGraph-orchestrated pipeline that generates transcripts, creates chapter summaries, embeds segments with a fine-tuned SBERT model, re-ranks results with a cross-encoder, and serves recommendations through a FastAPI service tracked in MLflow. My eight-year track record, a MSc in Machine Learning and AI, and multiple production GenAI systems give me the credibility to deliver at this scale.

I will first invent the retrieval and reasoning models needed for poorly defined content-understanding problems, replicating the cross-encoder re-ranking pipeline I built at Optum that raised dense-retrieval accuracy by 20 %. Next, I will productionize the end-to-end service, as I did at Viavi where I deployed an SLA-breach predictor with FastAPI, MLflow, and GPT-4 reasoning, cutting downtime by 67 %. Finally, I will create reusable, architecture-aware components such as the automated evaluation and observability pipelines I delivered for QA agents at Optum, ensuring continuous monitoring of relevance drift via Elasticsearch and Kibana. Each of these actions directly addresses Audible's need for scientific models, production-grade services, and reusable components.

My workflow moves from rapid prototype to production by translating business questions into measurable ML experiments, collaborating with product managers and engineers, and validating performance before release. I have repeatedly turned proof-of-concepts into shipped services, using Docker, Kubernetes, and CI/CD pipelines that the team expects.

My goal is to own the core content-understanding and recommendation engine for Audible, expanding it into a platform that powers personalized experiences across the entire catalog. This role offers the ideal environment to apply my GenAI and MLOps expertise while growing deeper into large-scale media recommendation challenges.

My fiancée already lives in Berlin, so this role lets me build my career in the city where we are making our home, and I am committed to settling in Berlin long term. I would welcome the opportunity to discuss how my experience can accelerate Audible's vision.

Sincerely,

Abhinav Kaushik
